

TRW WORLD HEADQUARTERS

Lyndhurst, Ohio

Building Type: Corporate Conference and Training Facility

Overview: Programming and design of 25,000 SF of Conference and Breakout Meeting Rooms, a 250 seat Auditorium, SCIF Meeting Rooms, Audiovisual Support and Pre-function/Hospitality Space.

Role: Project Designer

TRW sought to create an office environment that would support their goal to recruit and retain the brightest minds. They recognized that this employee base would come from academia and seek the stimulating, collegial environment that academic institutions provide. The conference and training facilities are located in a wing of the building off the atrium and separate from the office space, with the intent of providing a cloistered meeting area removed from the stress of the office environment.

The conference and training facilities are designed to accommodate staff from remote manufacturing locations as well as corporate headquarters staff. All conference rooms are teleconferencing and video projection capable with some fitted out with video-conferencing equipment connected to TRW manufacturing facilities and clients around the world. Each conference room has an associated cluster of six person breakout meeting rooms for small group work sessions and training. There is a video filming studio elsewhere in the building for preparing pre-recorded programs. The 250 seat auditorium is configured for TRW's quarterly management meeting of senior staff from manufacturing sites worldwide. It also has a stage and grand piano for use during company functions and for holiday employee social gatherings.
